Titr.

The Broadcast System for Local TV

Newsroom, on-air graphics, live market data and playout behind one login, running a whole station from one PC.

The Problem

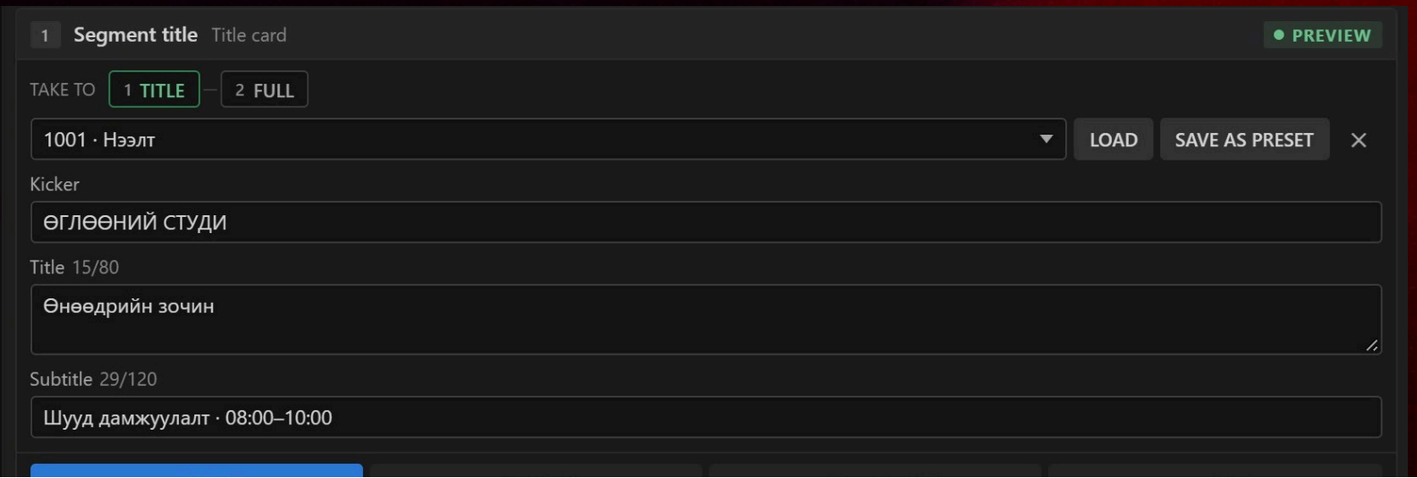

Local stations run news, graphics and playout on separate tools that never share data, so every headline is typed more than once.

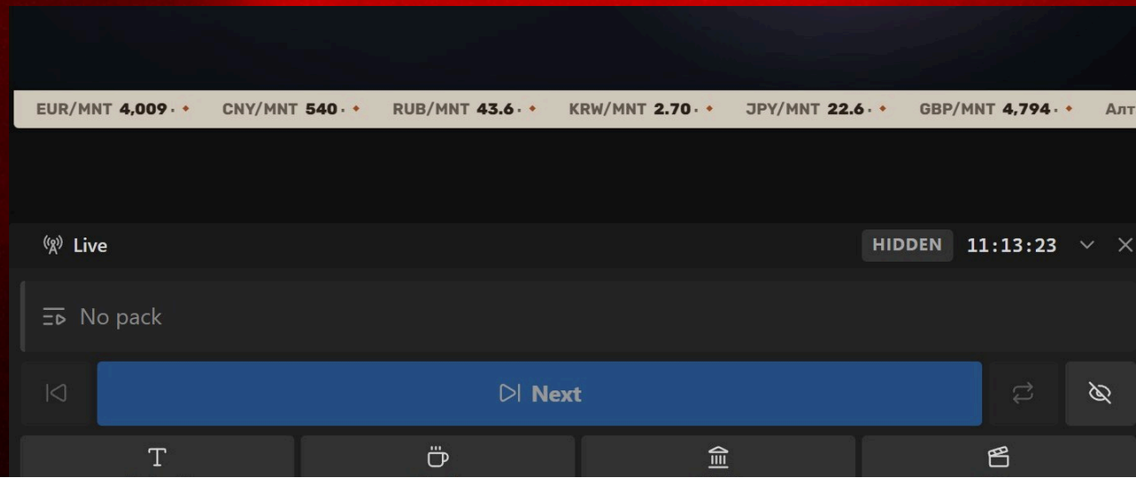

In the Newsroom

Headlines are retyped from the newsroom into graphics and again into playout. Rates and weather are typed by hand, and go stale.

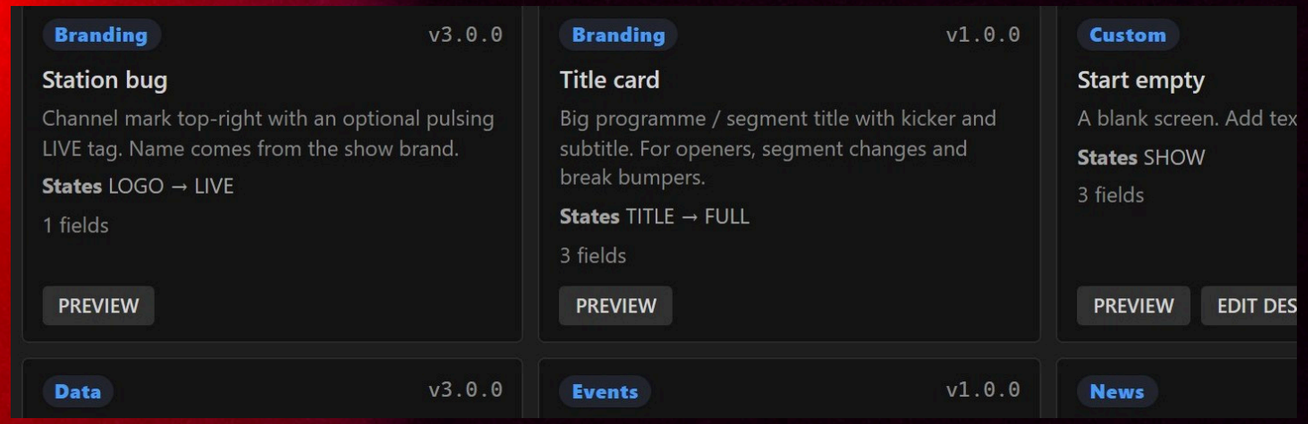

In the Control Room

No preview, no approval and no record of who put what on screen, while each tool brings its own licence and login.

Our Solution

Newsroom

Journalists write headline packs. The director approves them and runs the newsroom strip, live on air.

Graphics

Cue a graphic, check it on preview, take it to program. Templates are built without code.

Playout

The CasparCG engine keys it all over video and sends one program to NDI, SDI, OBS or vMix.

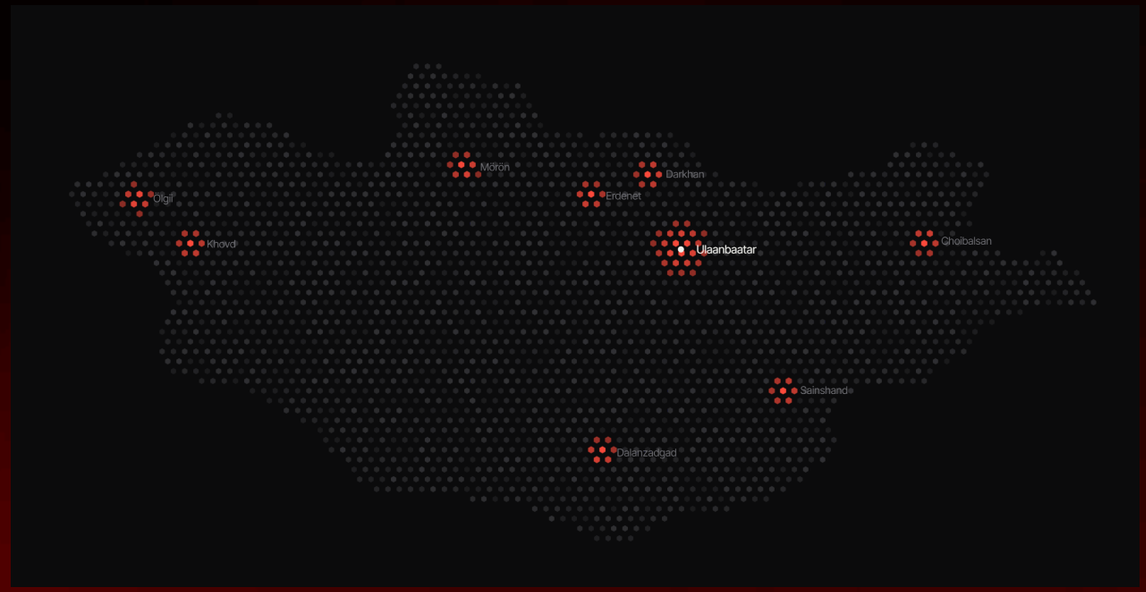

Who It's For

1 PC

Runs a whole station: newsroom, graphics and playout, with no server room, no cloud contract and no licence server.

21

Aimag centres across Mongolia, plus the capital: each with local news, local prices and weather to put on screen.

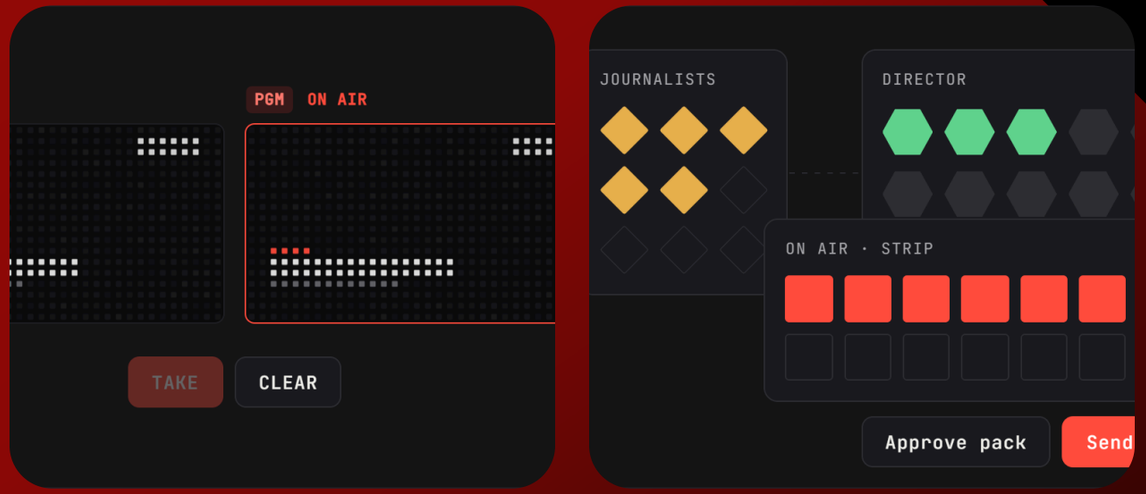

Why Titr?

Runs Offline

Fonts, templates and data live on the station PC. Losing the internet doesn't take you off air.

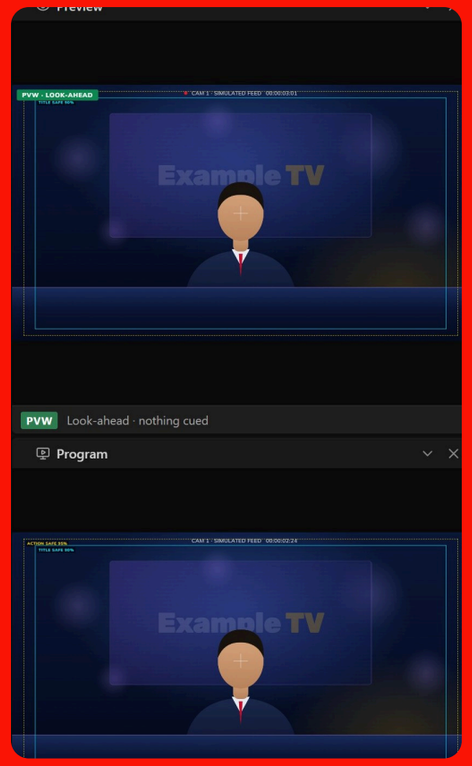

Safe on Air

Edits on air wait for TAKE, Clear air asks twice, five roles see only their rooms, and every take is logged.

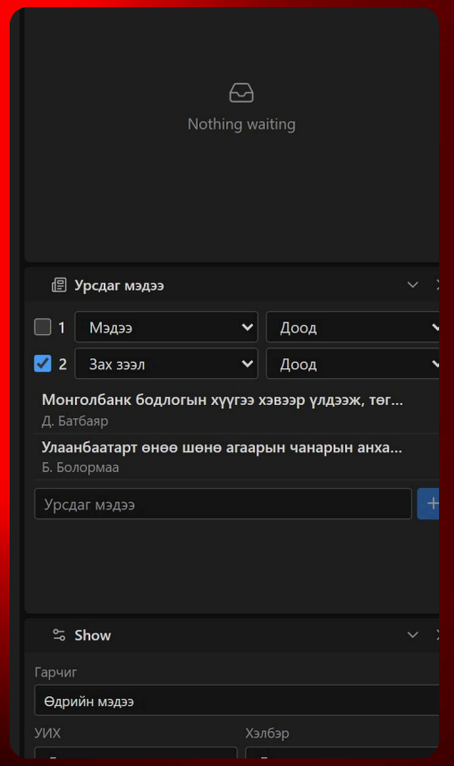

Titr

Who Uses It

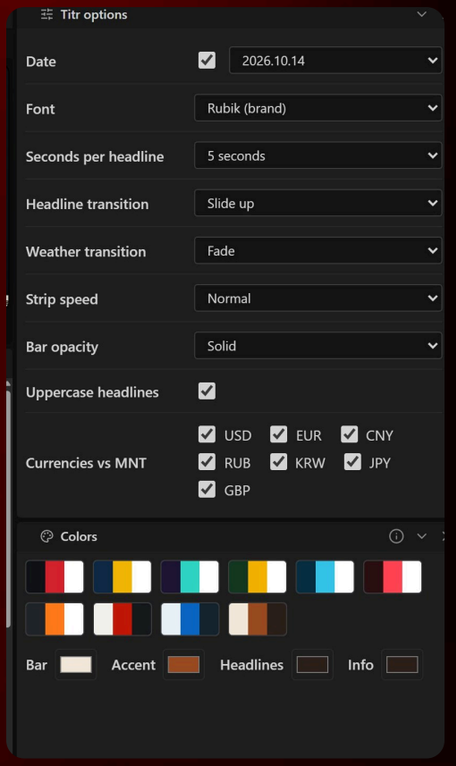

Operator

Graphics Control

Director

Director Desk

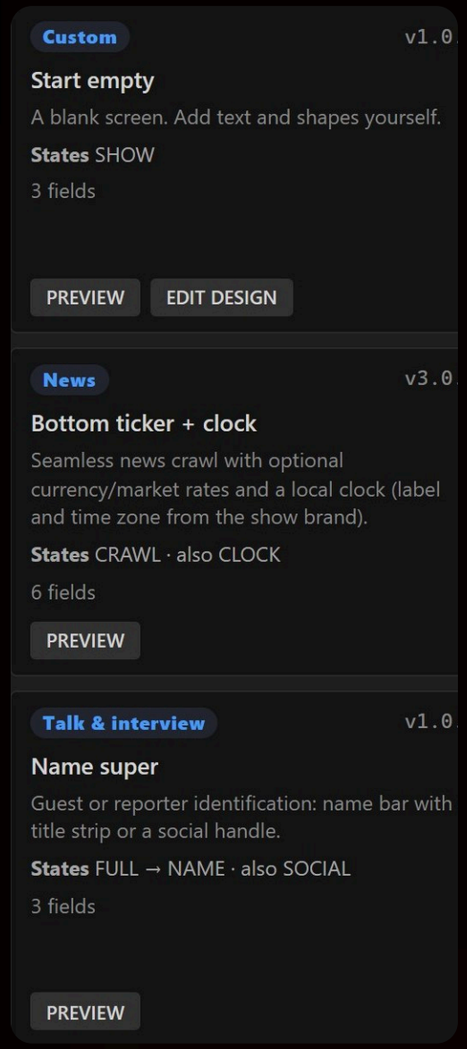

Producer

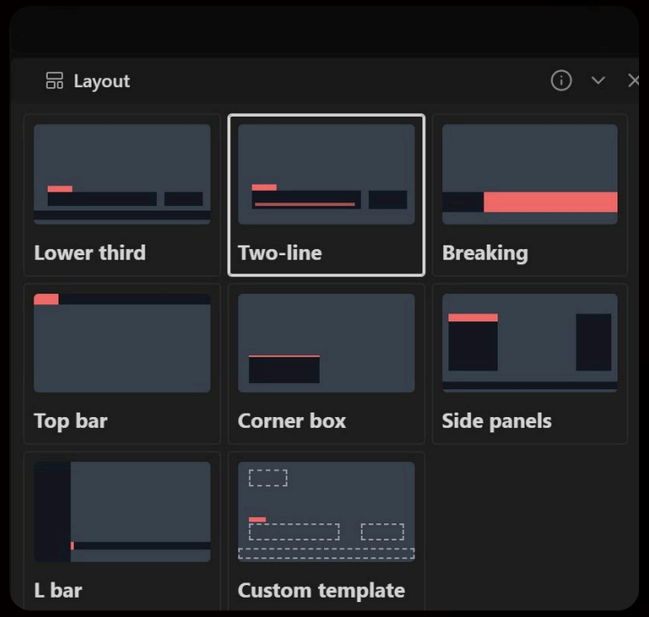

Prepare & Designer

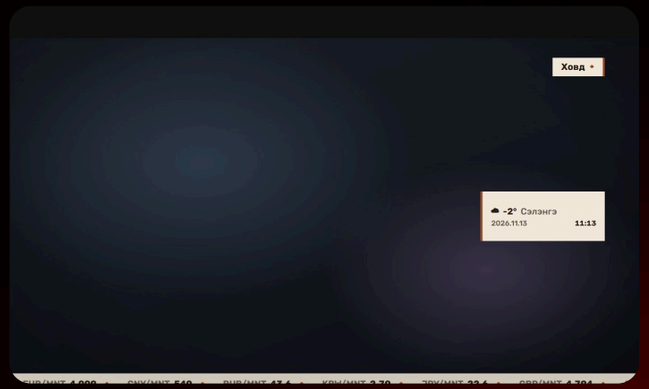

Five roles share one system. Each person signs in and sees only the rooms their job needs.

Inside the Rooms

Eight Rooms, One Login

Graphics control, playout, designer, shows, prepare, director, journalist and producer desks, all in one browser design. Shown: the template library, strip layouts and the director's program.

Live Market Data

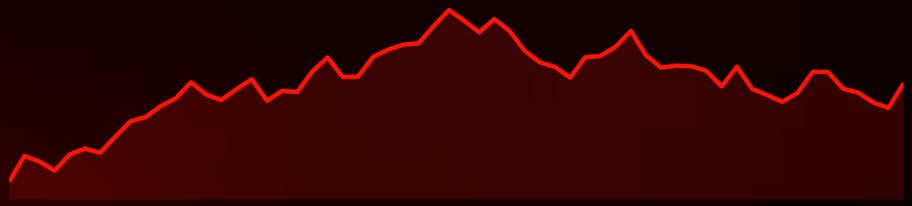

Exchange rates, gold, copper and markets feed straight into the ticker and statistic cards. When a price moves, the number on air moves with it: up in green, down in red, with no one retyping it.

Values from the app's feed on 13/11/2026; movement in the web version is a preview. Official Монголбанк rates are being connected; until then rates are marked ЖИШЭЭ on air.

LIVE FEED · PREVIEW

USD/MNT

3,607 • 0.00%

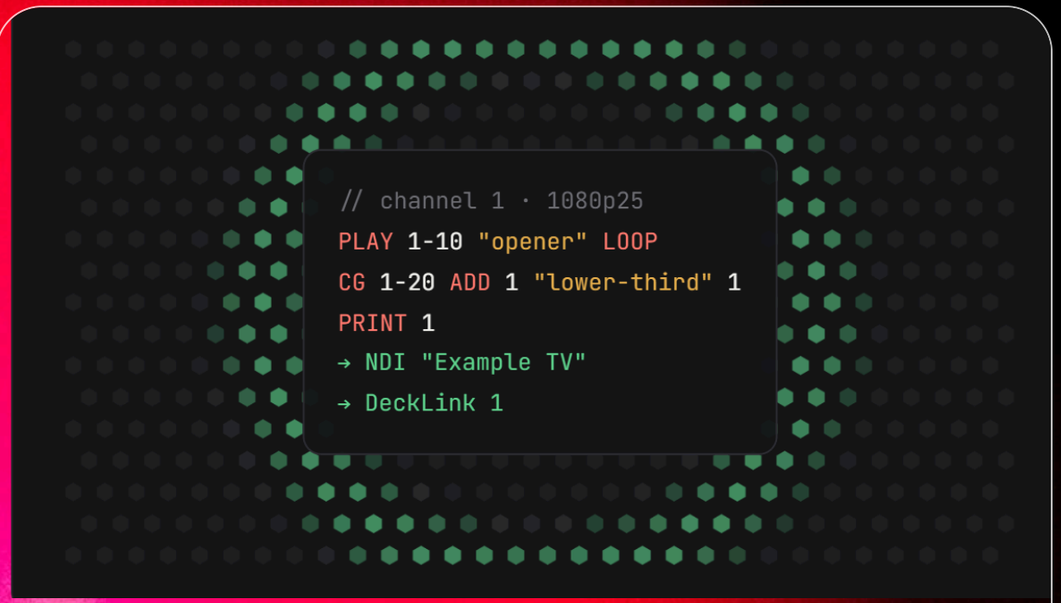

EUR/MNT	4,009	• 0.00%
CNY/MNT	540	• 0.00%
Алт	3,893	▲ 0.19%
Зэс	6.20	▲ 0.11%
Bitcoin USD	71,095	▼ 0.39%

ЖИШЭЭ

USD/MNT 3,607 • 0.00% EUR/MNT 4,009 • 0.00% CNY/MNT 540 • 0.00% RUB/MNT 43.6 • 0.00% KRW/MNT 2.70 • 0.00% JPY/MNT 22.

What's Next?

Titr runs end to end on one PC, and its NDI output is proven with a real receiver: 1080p at 59.94 fps with no dropped frames in the test.

- SDI and the real switcher
- Official Монголбанк rates
- Start on boot at the station
- 72-hour soak test
- Mongolian interface
- Then: real air
